

Heatmap visualization showing the relationship between Grid Size (X-axis, ranging from 10 to 100) and an unlabeled variable (Y-axis, ranging from 5 to 50). The color scale ranges from dark purple (low values) to yellow (high values). The highest values (yellow) are concentrated in the top-left corner, specifically for Grid Size between 10 and 20 and Y-axis values between 40 and 50. The values generally decrease as Grid Size increases and the Y-axis value decreases.
